MTH 100 – Final Exam Review

Part 1 of your exam will be multiple-choice. It will have 38 problems. You will need a scantron for this part. You will show your work on your paper. I will not give partial credit for these problems. If I average your grade and you are on the border line between two letter grades, I will go back to the work for this part and look for some partial credit. The work will have to be neat and numbered in order for me to do this. Study for this part of the test using the exam practice test part 1 on my webpage. Focus on the following problems.
1, 2, 3, 5, 9, 11, 12, 13, 14, 19, 25, 30, 32, 36, 39, 40, 41, 42, 43, 46, 53, 55, 59, 64, 70, 71, 74, 75, 77, 81, 84, 85, 89, 94, 97, 98, 99, 101, 102

There are 3 things I left off of the practice unintentionally. Study distance, midpoint, and problems with complex numbers in the denominator (ex. $\frac{2i}{1-i}$).

Part 2 of your exam will be like a regular test you have taken for me. You will show your work on the test paper, and you can receive partial credit for these. Study for this part of the test using the exam practice test part 2. If you printed this part early in the semester, trash that and reprint it. I uploaded a new and improved version a few weeks ago.

I am posting the key for test 3 on my webpage along with the keys to test 1 and 2 that have already been posted. Use these to study as well.

Please let me know if you have any questions or need help with anything.
